

CUSTOMIZE YOUR PRODUCTS !

Procys provides printers able to customize your products with an innovative industrial solution. **Procys is your partner for the whole package**, equipment and edible inks. We define with you the best way to implement the printer, taking in consideration all technical characteristics of your products and production line. If needed, we also bring solutions to manage the product flow on your existing line.

A scalable technology

- ✓ compact version: mobile device allowing to print from 1 to 4 lanes. This flexible and scalable system can be moved on several lines. It can be installed in front of a flowpack to print just before individual packaging (possibility to rent the 1 lane version).
- ✓ wider version: fixed system adapted to your line width, installed before or after the oven. Several printheads give the possibility to work with a variable number of products.

Innovative & trendy

Product customization is currently very trendy, but the ability to carry it out industrially and in a flexible way is innovative. The system allows changing the image without any mechanical tooling and gives you a lot of flexibility (controlled by software from touch screen).

Add value through food printing

Manufacturers are focusing on differentiation. There are many ways to reach your customers and promote your brand: advertising, seasonal campaigns, promote an event, deliver a message etc. That's a good challenge for R&D or marketing ! Let's Procys helps you to add value to your products.

Edible Inks

Procys provides you natural/clean: brown & magenta, for now, other colours are coming soon or synthetic inks (all colours mostly available).
